MATERIAL SAFETY DATA SHEET

Product Name: Mitoxantrone Injection, USP (Concentrate)

1. CHEMICAL PRODUCT AND COMPANY INFORMATION

Manufacturer Name And Address
Hospira Inc.
275 North Field Drive
Lake Forest, Illinois USA
60045

Hospira Australia Pty Ltd
1 Lexia Place
Mulgrave, VIC 3170
Australia

Emergency Telephone
CHEMTREC: North America: 800-424-9300;
International 1-703-527-3887; Australia (02) 8014 4880

Hospira, Inc., Non-Emergency 224-212-2000

Product Name Mitoxantrone Injection, USP (Concentrate)

Synonyms 1, 4-dihydroxy-5, 8-bis[(2-hydroxyethyl) amino]ethyl]amino]-9,10- anthracenedione dihydrochloride

2. COMPOSITION/INFORMATION ON INGREDIENTS

Active Ingredient Name Mitoxantrone Hydrochloride

Chemical Formula C_{22}H_{28}N_{4}O_{6} • 2 HCl

Preparation Non-hazardous ingredients include Water for Injection. Hazardous ingredients present at less than 1% include sodium chloride and sodium acetate; acetic acid may be added to adjust the pH.

Emergency Overview Mitoxantrone Injection, USP (Concentrate) is a solution containing mitoxantrone hydrochloride, an anthracenedione antibiotic structurally and pharmacologically related to doxorubicin. Mechanistically, it intercalates into and cross links DNA, disrupting DNA and RNA replication. It also binds to topoisomerase II, resulting in DNA strand breaks and inhibition of DNA repair. Clinically, it is used to treat multiple sclerosis and adult acute myeloid leukemia’s, hormone-refractory prostate cancer, liver cancer, and ovarian cancer. It is a cytotoxic agent, and in the workplace should be considered a potential occupational reproductive hazard, harmful to the fetus, and a potential human carcinogen. Based on clinical
Product Name: Mitoxantrone Injection, USP (Concentrate)

use, possible target organs may include the bone marrow, gastrointestinal system, central nervous system, cardiovascular system, lungs, liver, skin, and the fetus.

**Occupational Exposure Potential**

Information on the absorption of this product via inhalation or skin contact is not available. There are scientific studies that suggest that personnel (e.g. nurses, pharmacists, etc.) who prepare and administer parenteral antineoplastics (e.g. in hospitals) may be at some risk due to potential mutagenicity, teratogenicity, and/or carcinogenicity of these materials if workplace exposures are not properly controlled. The actual risk in the workplace is not known. Avoid liquid aerosol generation and skin contact.

**Signs and Symptoms**

None known from occupational exposure. This product should be considered irritating to the skin, eyes and respiratory tract. In clinical use, mitoxantrone may produce bone marrow suppression, hepatotoxicity, nausea, vomiting and diarrhea; headaches and seizures, alopecia, menstrual disorders including amenorrhea, upper respiratory tract infections, urinary tract infections, stomatitis, arrhythmias, diarrhea, and abnormal urines. Use of mitoxantrone has also been associated with interstitial pneumonitis and cardiotoxicity. Congestive heart failure (potentially fatal) can occur either during therapy, or months to years after therapy; the risk of cardiotoxicity increases with cumulative dose/prolonged administration. Extravasation can result in tissue necrosis with resultant need for debridement and skin grafting. Phlebitis has also been reported at the site of the infusion. Secondary acute myelogenous leukemia (AML) has been reported in patients treated with mitoxantrone.

**Medical Conditions Aggravated by Exposure**

Pre-existing hypersensitivity to mitoxantrone HCl. Pre-existing bone marrow, cardiovascular, gastrointestinal, central nervous system, pulmonary, liver, or skin ailments; or pregnancy.

### 4. FIRST AID MEASURES

**Eye contact**

Remove from source of exposure. Flush with copious amounts of water. If irritation persists or signs of toxicity occur, seek medical attention. Provide symptomatic/supportive care as necessary.

**Skin contact**

Remove from source of exposure. Flush with copious amounts of water. If irritation persists or signs of toxicity occur, seek medical attention. Provide symptomatic/supportive care as necessary.

**Inhalation**

Remove from source of exposure. If signs of toxicity occur, seek medical attention. Provide symptomatic/supportive care as necessary.

**Ingestion**

Remove from source of exposure. If signs of toxicity occur, seek medical attention. Provide symptomatic/supportive care as necessary.

### 5. FIRE FIGHTING MEASURES

**Flammability**

None anticipated for this aqueous product.

**Fire & Explosion Hazard**

None anticipated for this aqueous product.

**Extinguishing media**

As with any fire, use extinguishing media appropriate for primary cause of fire.

**Special Fire Fighting Procedures**

Firefighters should wear self-contained breathing apparatus. Protective equipment and clothing should be worn to minimize contact with the respiratory tract, skin and eyes.
6. ACCIDENTAL RELEASE MEASURES

Spill Cleanup and Disposal
Isolate area around the spill. Put on suitable protective clothing and equipment as specified by site spill procedures. Absorb the spilled liquid with a suitable material, then clean the affected area with soap and water. Additionally, application of a 50% solution of household bleach (in water) for 10 minutes can be used to further decontaminate the affected spill area. Use care to avoid splashing when applying the bleach solution. Absorb the bleach using a suitable material, then clean again with soap and water. Dispose of all spill materials according to the applicable federal, state, or local regulations.

7. HANDLING AND STORAGE

Handling
Mitoxantrone hydrochloride is a cytotoxic anti-neoplastic agent. Appropriate procedures should be implemented during the handling and disposal of cytotoxic anti-neoplastic agents to minimize potential exposures. Several guidelines on handling cytotoxic anti-neoplastic agents have been published. There is no general agreement that all of the procedures recommended in the guidelines are necessary or appropriate. Consult your hygienist or safety professional for your site requirements.

Storage
No special storage is required for hazard control. However, employees should be trained on the proper storage procedures for anti-neoplastic agents. For product protection, follow storage recommendations noted on the product case label, the primary container label, or the product insert.

Special Precautions
Persons with known hypersensitivities to mitoxantrone hydrochloride, women who are pregnant, or women who want to become pregnant, should consult a health and/or safety professional prior to handling this product.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Exposure Guidelines

Respiratory protection
Respiratory protection is normally not needed during intended product use. However, if the generation of aerosols is likely, and engineering controls are not considered adequate to control potential airborne exposures, the use of an approved air-purifying respirator with a HEPA cartridge (N99 or equivalent) is recommended under conditions where airborne aerosol concentrations are not expected to be excessive. For uncontrolled release events, or if exposure levels are not known, provide respirators that offer a high protection factor such as a powered air purifying respirator or supplied air. A respiratory protection program that meets OSHA’s 29 CFR 1910.134 and ANSI Z88.2 requirements must be followed whenever workplace conditions require respirator use. Personnel who wear respirators should be fit tested and approved for respirator use as required.

Skin protection
When handling this product, disposable gloves should be worn at all times. Further, the use of double gloves is recommended. Disposable gloves made from nitrile, neoprene, polyurethane or natural latex generally have low permeability to this material. Persons known to be allergic to latex rubber should select a non-latex glove. Gloves should be changed regularly, and removed immediately after known contamination. Care should be taken to minimize inadvertent contamination when removing and/or disposing of gloves.
Product Name: Mitoxantrone Injection, USP (Concentrate)

Eye protection
As a minimum, the use of chemical safety goggles is recommended when handling this product.

Engineering Controls
Local exhaust ventilation may be used to minimize employee exposure. The use of an enclosure, such as an approved ventilated cabinet designed to minimize airborne exposures, is recommended.

10. STABILITY AND REACTIVITY

Reactivity
Not determined.

Chemical Stability
Stable under standard use and storage conditions.

Hazardous Reactions
Not determined.

Conditions to avoid
Not determined.

Incompatibilities
Not determined.

Hazardous decomposition products
Not determined. During thermal decomposition, it may be possible to generate irritating vapors and/or toxic fumes of carbon oxides (COx), nitrogen oxides (NOx), and hydrogen chloride.

Hazardous Polymerization
Not anticipated to occur with this product.
11. TOXICOLOGICAL INFORMATION

Acute Toxicity
Not determined for the product formulation. Information for the ingredients is as follows:

Aspiration Hazard
None anticipated from normal handling of this material.

Dermal Irritation/Corrosion
None anticipated from normal handling of this product. However, inadvertent skin contact with this product may produce irritation with redness and discomfort.

Ocular Irritation/Corrosion
None anticipated from normal handling of this product. However, inadvertent eye contact of this product with eyes may produce irritation with stinging, redness, tearing and discomfort.

Dermal or Respiratory Sensitization
None anticipated from normal handling of this product. In clinical use, hypotension, urticaria, dyspnea, and rashes have been reported occasionally. Anaphylaxis/anaphylactoid reactions have been reported rarely.

Reproductive Effects
Administration of mitoxantrone to pregnant rats during organogenesis was associated with fetal growth retardation at dosages >= 0.1 mg/kg/day. When pregnant rabbits were treated during organogenesis, an increased incidence of premature delivery was observed at dosages >= 0.1 mg/kg/day. No teratogenic effects were noted in these studies, but the maximum dosages tested were well below the recommended human dose.

Mutagenicity
Mitoxantrone was clastogenic in the in vivo rat bone marrow assay, and also in two in vitro assays; it induced DNA damage in primary rat hepatocytes and sister chromatid exchanges in Chinese hamster ovary cells. Mitoxantrone was mutagenic in bacterial and mammalian test systems (Ames/Salmonella and E. coli and L5178Y TK+/-.mouse lymphoma).

Carcinogenicity
Treatment of rats and mice with mitoxantrone intravenously once every 21 days for 24 months produced an increased incidence of fibroma and external auditory canal tumors in rats at a dosage of 0.03 mg/kg, and hepatocellular adenoma in male mice at a dosage of 0.1 mg/kg. Intravenous treatment of rats, once every 21 days for 12 months with mitoxantrone resulted in an increased incidence of external auditory canal tumors in rats at a dosage of 0.3 mg/kg. Clinically, secondary acute myelogenous leukemia (AML) has been reported in multiple sclerosis and cancer patients treated with mitoxantrone. In general, one study suggests that the cumulative probability of developing secondary leukemia is about 2.2% at 4 years.

Target Organ Effects
This material should be considered irritating to the skin, eyes and respiratory tract. Following an accidental over-exposure, possible target organs may include the bone marrow, gastrointestinal system, central nervous system, cardiovascular system, lungs, liver, skin, and the fetus.
12. ECOLOGICAL INFORMATION

Aquatic Toxicity
Not determined for product. For the active ingredient: IC100 = 10 mg/ml in a growth inhibition assay in P. putida.

Persistence/Biodegradability
Mitoxantrone was not biodegradable in a 28-day Ready biodegradation assay.

Bioaccumulation
Not determined for product

Mobility in Soil
Not determined.

13. DISPOSAL CONSIDERATIONS

Waste Disposal
All waste materials must be properly characterized. Disposal should be performed in accordance with the federal, state or local regulatory requirements.

Container Handling and Disposal
Dispose of containers and unused contents in accordance with federal, state and local regulations.

Prevention
P260 - Do not breathe dust/fume/gas/mist/vapors/spray.
Product Name: Mitoxantrone Injection, USP (Concentrate)

Hazard Statement

Response: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical attention. Wash hands after handling.

Get medical attention if you feel unwell.

EU Classification*
*Medicinal products are exempt from the requirements of the EU Dangerous Preparations Directive. Information provided below is for the pure drug substance Mitoxantrone Hydrochloride.

Classification(s): Not Applicable

Symbol: Not Applicable

Indication of Danger: Not Applicable

Risk Phrases: Not Applicable

Safety Phrases: S23 - Do not breathe vapor.
S24 - Avoid contact with skin.
S25 - Avoid contact with eyes.
S37/39 - Wear suitable gloves and eye/face protection.
